0.1 overview	1
------------------------	---

0.1 overview

- 1. **This routine need to be updated.**
- 2. A knot is a closed curve in three-dimensional space.
- 3. The parameters describing the knot, namely **xkc**, **yks** and **zks**, are read from **knot**.
- 4. If **kspring** > 0, the knot is “relaxed” to minimize the “spring energy” using [NAG:D02BHF](#).
